REPORT on the GEOLOGIC and GEOMORPHIC CHARACTERISTICS of the GUALALA RIVER WATERSHED, CALIFORNIA

BY

Michael Fuller (CEG) and Kit Custis (CEG, CHG)

December 2002

Prepared in cooperation with the
CALIFORNIA RESOURCES AGENCY'S
NORTH COAST WATERSHED ASSESSMENT PROGRAM

Copies of this report and other related information are available on the World Wide Web at <http://www.consrv.ca.gov>. Copies also are available for purchase from the Public Information Offices of [the California Geological Survey](#).

Table 7:	Rosgen classes and stream gradients	59

LIST OF APPENDICES

Appendix 1:	Time series of photos showing temporal changes	67
Appendix 2:	Stream characteristics photo mapping dictionary	71
Appendix 3:	Estimation of sediment yield	90

LIST OF PLATES

(Plates are attached to the Gualala River Watershed Assessment)

Plate 1:	Geologic and geomorphic features related to landsliding
Plate 2:	Relative landslide potential map
Plate 3:	Sediment sites recommended as potential restoration targets

ACKNOWLEDGEMENTS

This geologic report was produced as an appendix to the North Coast Watershed Assessment Program's (NCWAP) Gualala River Watershed Assessment. The preparation of this geologic report and the creation of the Geographic Information System (GIS) for NCWAP required the efforts of a team of geoscientists and GIS experts. The authors are deeply appreciative of the behind-the-scenes support orchestrated by Mary Scruggs. Others within California Geological Survey that deserve thanks are: Wayne Haydon, Mike Purcell (both geologists), Pete Roffers, Sandra Summers, Lisa Ohara, and John Carotta (all GIS experts). Thanks to the thoughtful peer reviews provided by Trinda Bedrossian, Bill Short, and John Schlosser. We also appreciate the property access granted by Soper-Wheeler, Gualala Redwoods, Incorporated, Pioneer Resources, and Mendocino Redwoods Company. Access to those properties for field evaluation greatly enhanced our work.
